

What is claimed is:

1. An electronic-mail transmission/reception apparatus for transmitting and receiving electronic mails, comprising:

5 a condition setting unit which sets in said electronic-mail transmission/reception apparatus a condition for displaying a list of at least one information item on at least one title of at least one electronic mail which has been transmitted or received;

10 a sorting unit which sorts said at least one information item into a hierarchical structure according to said condition; and

a list displaying unit which displays a list of said at least one information item which is sorted by
15 said sorting unit.

2. An electronic-mail transmission/reception apparatus according to claim 1, wherein said sorting unit sorts said at least one information item according to
20 attribute information which each of said at least one electronic mail has.

3. An electronic-mail transmission/reception apparatus according to claim 2, wherein said attribute
25 information is contained in a header of said at least one electronic mail.

4. An electronic-mail transmission/reception apparatus according to claim 1, further comprising a display information removing unit which removes a portion of information displayed by said list displaying unit,
5 according to display capacity of said list displaying unit.

5. A computer-readable storage medium storing a program which makes a computer execute processing for transmitting and receiving electronic mails, said program
10 further makes said computer realize:

a condition setting unit which sets in said computer a condition for displaying a list of at least one information item on at least one title of at least one electronic mail which has been transmitted or received;

15 a sorting unit which sorts said at least one information item into a hierarchical structure according to said condition; and

a list displaying unit which displays a list of said at least one information item which is sorted by
20 said sorting unit.
